GLOBALJIG[®]

Conversion Set

The Universal Bracket System that improved and made faster the straightening operations of damaged vehicle bodies.

It can be applied on any repair bench, transforming it into a modern positive control and straightening system, freeing the body repairer from dependence on rental of accessories and model specific brackets.

Traxo

Robotic pulling tower, capable of movements that normal pullers cannot carry out. Eliminates chain and clamps, improving safety for the user.

Koala

Small straightening bench with great versatility, suitable for all situations of "fast repair".

GlobalSpeed

A bench of 4,5 meters in length designed for the needs of the modern body shop. The Globaljig Universal Bracket System mounted previously on old 4 post benches, now bulky and obsolete can be applied on the Global Speed.

GlobalScan

High technology electronic measuring system, used to measure and diagnose the status of the vehicle body structure and for evaluation of damage sustained by the vehicle in an accident.

GlobalZip

Bench with incorporated scissor lift, complete with the Globaljig Universal Bracket System and articulated pulling tower.

System

Mobility and practicality: these are the basis of the philosophy of the mobile bench on wheels, approved by the most important automobile manufacturers. Supplied with the Globaljig Universal Bracket System, it can be used with single column or 2 post lifts.

SuperRotax

Considered by the experts to be the top of the class, what the modern and demanding body shop needs. The first bench of its kind to have the pulling tower always mounted on board, moving 360° around the frame.
